Description of DFC Application Router

Instead of using the Restcomm Default Application Router, any SIP Servlets 1.1 compliant Application Router can be used, including the eCharts DFC Application Router.

Installing the DFC Application Router

Detailed instructions are available from the eCharts website. The following procedure describe how to install the eCharts DFC Application Router (DFCAR) on a variety of SIP Servlet Server platforms.

Procedure: Installing DFCAR on Tomcat

1. Deploy the DFCAR

Drop the *dfcar.jar* from the ECharts distribution package in the TOMCAT_HOME/lib directory.

2. Remove the DAR

Remove the Restcomm Default Application Router located in TOMCAT_HOME/lib/sip-servlets-application-router-*.jar.

Please see the following link to learn how to deploy jar files in Restcomm for JBoss AS7.

Procedure: Installing DFCAR on JBoss AS7

1. Deploy the DFCAR

Create a directory under JBOSS_HOME/modules/system/layers/base/org/echarts/

Drop the *dfcar.jar* from the ECharts distribution package in the JBOSS_HOME/modules/system/layers/base/org/echarts/ directory.

Create a module.xml file under the same directory with the following contents

```
<module xmlns="urn:jboss:module:1.1" name="org.echarts">
<resources>
<resource-root path="dfcar.jar"/>
</resources>
<dependencies>
<module name="org.apache.log4j"/>
<module name="org.mobicents.javax.servlet.sip"/>
</dependencies>
</module>
```

2. Remove the DAR

Remove the Restcomm Default Application Router located in JBOSS_HOME/modules/system/layers/base/org/mobicents/dar.

3. Use the DFC DAR

In JBOSS_HOME/modules/system/layers/base/org/jboss/as/web/main/module.xml, replace the following line

```
<module name="org.mobicents.dar" export="true"/>
```

by this one

<module name="org.echarts" export="true"/>
